Introduction:

Background:

The stop-and-frisk program in New York City, administered by the NYPD, allows officers to detain, question, and potentially search individuals suspected of carrying weapons or contraband. This initiative has sparked significant controversy due to concerns of racial profiling. In 2017, 90% of those stopped were African-American or Latino, primarily aged between 14 and 24. Despite efforts to address racial disparities, such as policy reforms, the disproportionate impact of the stop-and-frisk program persists, highlighting potential underlying factors like implicit bias.

Implicit bias, also known as implicit prejudice or implicit attitude, is a negative attitude, of which one is not consciously aware, against a specific social group. It is thought to be shaped by experience and based on learned associations between particular qualities and social categories, including race and/gender/age etc. Individuals' perceptions and behaviors can be influenced by the implicit biases they hold, even if they are unaware they hold such biases.

Dataset:

Each stop made by the NYPD requires officers to complete a detailed form, documenting various aspects of the encounter. Since 2017, these forms have been electronically recorded and stored in an NYPD database. The dataset contains information such as the stop's location,

officer details, characteristics of the stopped individual (including age, race, gender, etc.), frisk/search details, and the officer’s description of the individual’s demeanor during the stop.

Our analysis will utilize the most recently released NYPD annual report from the source: <https://www.nyc.gov/site/nypd/stats/reports-analysis/stopfrisk.page>, containing 82 variables and 16,871 observations.

Project Motivation & Research Question:

Among the 82 variables, a variable of particular interest is “demeanor of person stopped” - where the police utilize 1 - 2 adjectives to describe stop subject “demeanor”. Common adjectives include “calm”, “nervous”, “agitated”, “aggressive”, etc. It should be noted that these descriptions are self-generated instead of the police choosing from a pre-defined set of adjectives. We propose that these “demeanor” adjectives are indicative of the police officers’ perception of the stopped subject.

This project aims to investigate the relationship between physical/demographical characteristics of stopped individuals and the demeanor adjectives assigned by police officers. Specifically, we will explore:

- How do officer-assigned demeanor adjectives vary across different demographic groups (age, race, gender)?
- Are there correlations between certain physical characteristics and the types of demeanor descriptions used by officers during stops?
- Additionally, we will briefly examine whether demeanor descriptions influence subsequent police behaviors, such as frisking, searching, or requesting consent.

By analyzing these relationships, we seek to shed light on potential implicit biases affecting police interactions during stop-and-frisk encounters. Understanding these dynamics is crucial for addressing systemic biases and ensuring fair and equitable policing practices.

Variables Introduction:

Predictor variables of interest:

SUSPECT_REPORTED_AGE (chr and transformed to num): the age of suspect

SUSPECT_SEX (chr): female or male

SUSPECT_RACE_DESCRIPTION (chr): includes 7 categories: American Indian/Alaskan Native, Asian/Pacific Islander, Black, Black Hispanic, Middle Eastern/Southwest Asian, White, White Hispanic

SUSPECT_HEIGHT (chr and transformed to num): the height of suspect by feet

SUSPECT_WEIGHT (chr and transformed to num): the weight of suspect by pounds

SUSPECT_BODY_BUILD_TYPE (chr): includes categories: HEA(Heavy), MED(Medium), THN(Thin), U(Unknown), XXX(body type not applicable/placeholder value indicating missing data)

SUSPECT_EYE_COLOR (chr): includes categories: BLK(Black), BLU(Blue), BRO(Brown), GRN(Green), GRY(Grey), HAZ(Hazel), MUL(Multicolored), OTH(Other), PNK(Pink)

SUSPECT_HAIR_COLOR (chr): includes categories: BLD (Bald), BLK (Black), BLN (Blonde), BRO (Brown), GRN(Green), GRY (Gray), ORG (Orange), PLE (Purple), PNK(Pink), RED(Red), SDY(Sandy), WHI (White), XXX (Unknown/Unspecified - often used when the suspect's hair color is not recorded or unclear), ZZZ (could be an unusual or placeholder value indicating an error or missing data).

Note: The interpretation of categorical variables is based on conventions and assumptions due to the absence of a specific codebook for the dataset. Numeric variables (age, height, weight) are obtained through suspect report, while other categorical variables may reflect subjective perceptions of police or suspect report.

Variables of interest for exploratory analysis:

FRISKED_FLAG (chr): indicates whether or not the suspect was frisked (N = No, Y = Yes)

SEARCH_FLAG (chr): indicates whether or not the suspect was searched (N = No, Y = Yes)

ASK_FOR_CONSENT_FLG (chr): indicates whether the police asked for subject consent for the frisk/search behaviors after stop (N = No, Y = Yes)

Data Cleaning & New Variable Creation

Exploratory Data Analysis

```
demeanor_types <- stop_and_frisk |>
  count(DEMEANOR_OF_PERSON_STOPPED)

stop_and_frisk |>
  mutate(test = if_else(DEMEANOR_OF_PERSON_STOPPED == "AGITATED", 1, 0)) |>
  ggplot(aes(x = test, fill = SUSPECT_RACE_DESCRIPTION)) +
  geom_bar(position = "fill")
```

Warning: Removed 2548 rows containing non-finite values (`stat_count()`).

Let's categorize the 69 demeanor descriptions into 5 broad categories based on their similarity in meaning or behavior.

We'll group them as follows:

1. Calm/Neutral Demeanor:

- This category includes descriptions indicating a relaxed, cooperative, or normal state of mind.
- CALM - NORMAL - APPARENTLY NORMAL - RELAXED - QUIET - UNDERSTANDING - CALM AND COOPERATIVE - CALM AND COMPLIANT - CALM AND UNDERSTANDING - CALM COOPERATIVE - CALMED - NEUTRAL - CALM COMPLIANT - CALM UNDERSTANDING - APP NORMAL - COMPLIANT - APPARENT NORMAL

2. Nervous/Anxious Demeanor:

- Descriptions reflecting anxiety, nervousness, or apprehension.
- NERVOUS - ANXIOUS - VERY NERVOUS - EXTREMELY NERVOUS - PHYSICALLY NERVOUS - NERVOUS SCARED - NERVOUS OUT OF BREATH - AGGITATED - SCARED - SUSPICIOUS - APPREHENSIVE - WORRIED - NERVOUSE

3. Angry/Confrontational Demeanor:

- This category comprises descriptions indicating anger, aggression, or hostility.
- UPSET - ANNOYED - ANGRY - AGITATED - AGGRESSIVE - COMBATIVE - IRATE
- IRRITATED - AGGRAVATED - HOSTILE - MAD - AGGRESSIVE/NERVOUS - UNCOOPERATIVE - IRRATE - AGGRESIVE - ARGUMENTATIVE - DEFENSIVE - NON COMPLIANT

4. Confused/Disoriented Demeanor:

- Descriptions suggesting confusion, surprise, or disorientation.
- CONFUSED - SURPRISED - SHOCKED - INTOXICATED - INTOX - ERRATIC - OUT OF BREATH

5. Indifferent Demeanor:

- Descriptions suggesting withdrawal
- INDIFFERENT - EVASIVE - TIRED

Other/Outliers (Removed):

- Some descriptions are less common or do not fit well into the above categories.

Removed Descriptions: Defensive (21), Laughing (16), Crying (14), Excited (14), Talkative (22), NA, N/A

These categorizations aim to group similar demeanor descriptions together based on their emotional or behavioral context, allowing for a more concise representation suitable for further analysis using multinomial regression models.

Residual Deviance: 22827.77

AIC: 23067.77

nested test??

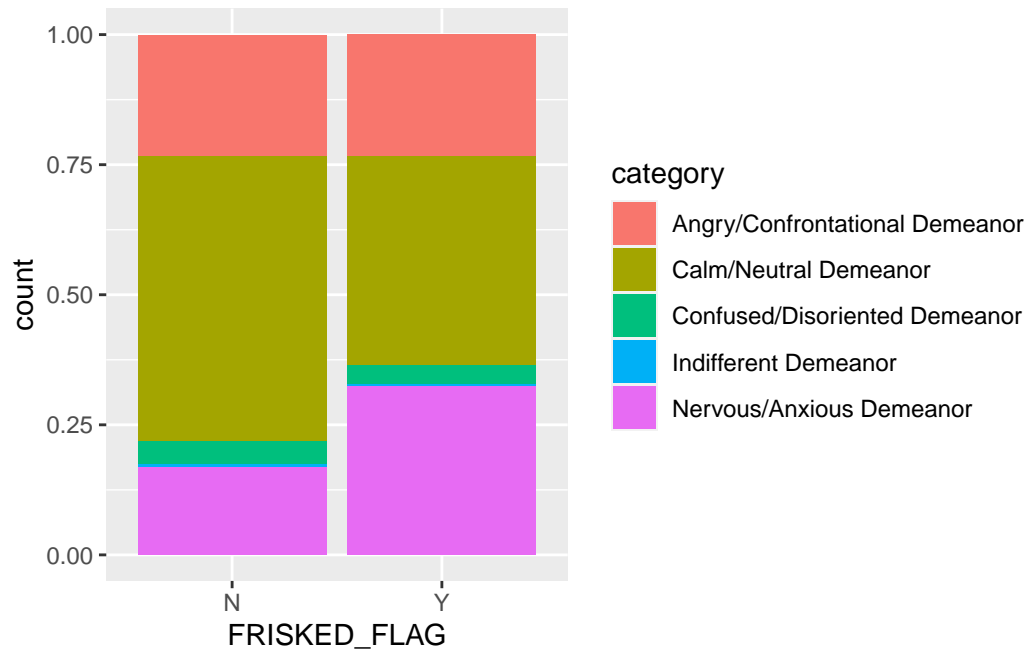

```
z <- summary(mtest)$coefficients/summary(mtest)$standard.errors
```

Warning in sqrt(diag(vc)): NaNs produced

Warning in sqrt(diag(vc)): NaNs produced

```
# 2-tailed Wald z tests to test significance of coefficients
p <- (1 - pnorm(abs(z), 0, 1)) * 2
```

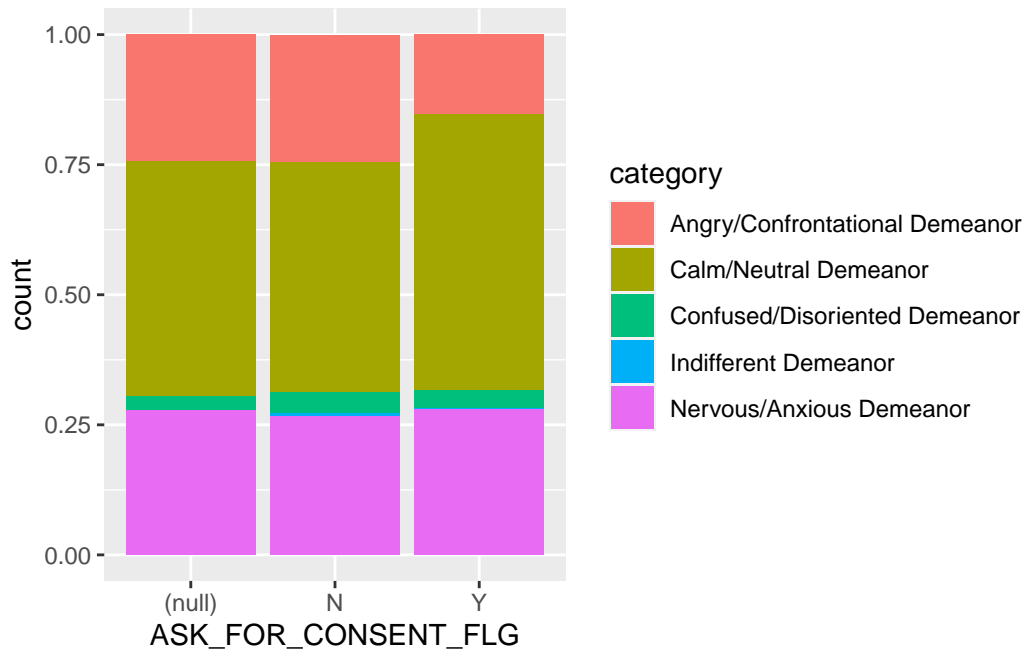

```
stop_and_frisk |>
  ggplot(aes(x = FRISKED_FLAG, fill = category)) +
  geom_bar(position = "fill")
```

```
stop_and_frisk |>
  ggplot(aes(x = SEARCHED_FLAG, fill = category)) +
  geom_bar(position = "fill")
```

```
stop_and_frisk |>
  ggplot(aes(x = ASK_FOR_CONSENT_FLG, fill = category)) +
  geom_bar(position = "fill")
```

Pattern

Visualizing missingness

Clean dataset

Select Variables

Set calm/neutral as baseline

Evaluate Model - testing + training

Assumption - independence & alternative

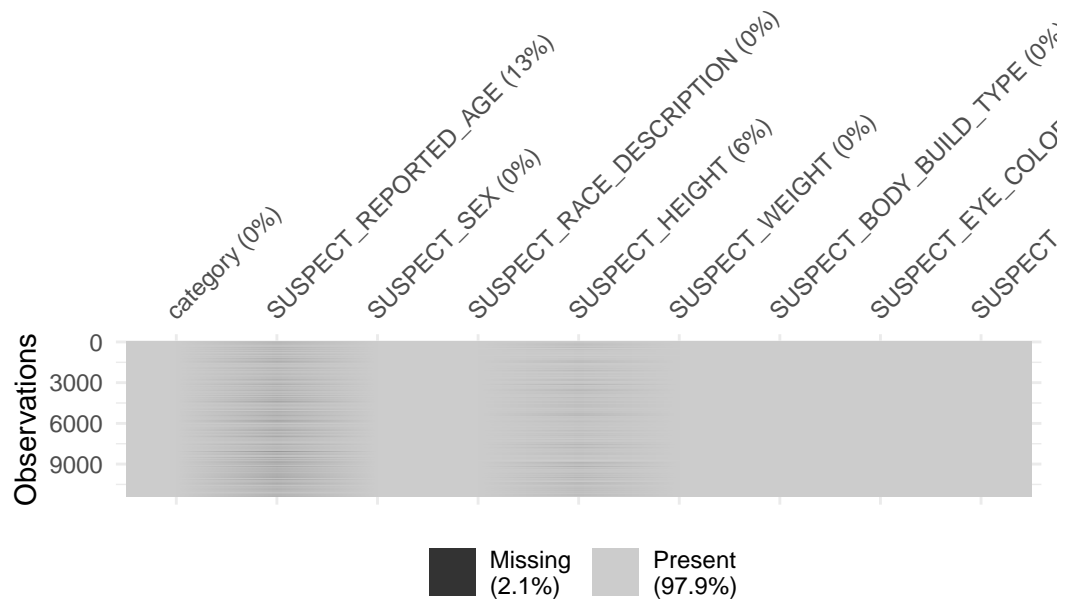

Do a logistic model: “calm” “ ”

```
install.packages("naniar")
```

Installing package into '/home/guest/R/x86_64-pc-linux-gnu-library/4.3'
(as 'lib' is unspecified)

```
library(visdat)
stop_and_frisk <- stop_and_frisk |>
  select(category, SUSPECT_REPORTED_AGE, SUSPECT_SEX, SUSPECT_RACE_DESCRIPTION, SUSPECT_HE
```

```
vis_miss(stop_and_frisk)
```

limitations:

- missingness
- definition of categories
- “reported age”, weight - rather arbitrary when considering what’s a “physical characteristic”
